

## 7 July 2025

### PCR 269: Prop Code History

On Saturday, 5 July, the Entity View page was enhanced with a "Prop Code History" button.

The screenshot shows the Entity View page with various input fields and buttons. The 'Prop Code History' button is highlighted with a red box, and a red arrow points to it from the right. The buttons are: Back, View History, Update Demographics, View Pending Requests, Add Entity, View Licenses, Notify Owner, Remove from Subset for Data Privacy, GLN Reuse History, Update Subset, Remove from Subset, and Prop Code History.

Clicking this button gives users the ability to see proprietary code changes on an entity and includes the prop code value, date, and the user ID that performed the prop code update.

## 24 June 2025

### PCR 268: Auto-Populate Corresponding UOM

On Saturday, 21 June, AGIIS was enhanced to auto-populate the corresponding Unit of Measure (UOM).

When adding a product's package size in AGIIS, it is a system requirement to assign a UOM. AGIIS supports two UOM standards, ANSI X12 and UN REC 20. Each of these standards in AGIIS contain a drop-down list of over 700 Units of Measure assigned with a two or three-digit code. For example, if the unit of measure for a product is in gallons, the X12 standard is GA while the UN REC 20 unit of measure is GLL.

Considering the UOM drop-down lists are extensive, it was cumbersome for the user to locate the UOM and assign it for both standards. To make this process more efficient, the

system now auto-populates the corresponding UOM. For example, if under the X12 standard the UOM is selected as LB, the UN REC 20 standard will auto-populate with LBR.

## PCR 270: Update Product Email Notification

Prior to today, when a user's scheduled product extract completes, they would receive an email notification with a hyperlink to the FTP site where the file can be downloaded.

The hyperlink did not require the user to input a username or password. DXC Cyber Security identified a security vulnerability with this approach, explaining that without credentials, a malicious actor with access to this link could place files containing viruses, malware, spyware, etc. on the FTP site. The Cyber Security team instructed the removal of anonymous access to mitigate this threat.

To remain in compliance, anonymous access has been removed. Email notifications have been updated with instructions on how to retrieve the product extract:

*To bolster security, we are no longer providing a direct retrieval link to your product extract.*

*You may retrieve your file from the AGIIS website by selecting the Files menu>Download Files>select the Product radio button. The name of your extract will be displayed as a*

*hyperlink. Click on the hyperlink to download your product extract. Please note that you must have the user privilege, "Product – Manage Extracts" to retrieve the file in this manner.*

Another retrieval option is to utilize an FTP client such as Filezilla. This method requires your organization's username and password.

### **PCR 266: Update Home Office Rule Code**

Each year, AGIIS undergoes a series of maintenance activities, one being annual de-duplication maintenance. This maintenance identifies duplicate entities (records sharing the same name and address) and determines which record(s) to inactivate, and determines the surviving entity based on a set of survivorship prioritization rules.

There is a set of code in AGIIS known as the Home Office Rule. This set of code is intended to prevent entities from being identified as duplicates when they all share the same mailing address but have different physical addresses. Many larger organizations have locations across the country, but have mail sent to one shared mailing address. The Home Office Rule code should prevent these types of entities from being considered as duplicates.

Therefore, we have modified the existing home office rule by comparing the physical addresses of two entities identified as duplicates, when we run the annual deduplication process. If the physical address is different for both entities, they will not be marked as duplicates, and need to fall under home office rule. They will be marked as duplicates only if their physical addresses are the same.

### **PCR 267: Ability to Update Password Security Questions**

On Saturday, 29 March, the User Profile page was enhanced with a "Security Questions" button. This gives the user the ability to update the three security questions and answers, just as they did when signing in for the first time.

When an AGIIS user signs into their profile for the first time, they are required to choose 3 security questions and provide answers that they will be able to recall at a later point in time. For added security, these questions are presented to a user when they click on the Forgot Password link. If the user answers the 3 security questions correctly, a password reset link is sent to the user's email address.

## PCR 265: Add Customizations Button to Extract View Page

On Saturday, 1 March, the Extract View page in AGIIS was enhanced by adding a “Customizations” button to the bottom of the page when a user selects a “Customized” report type.

When selecting the Full or Subset extract type, the button showing in the bottom-left will be the Submit button. \*Please note: When the Full extract type is selected, it will include products from all manufacturers.

The screenshot shows the 'Extract View' interface of the AgGateway AGIIS system. The top navigation bar includes links for HOME, LINKS, SEARCH, FILES, ADMINISTRATION, and HELP. The user is logged in as 'N. MARSHALL - AGGATEWAY'. The interface contains several configuration sections: 'Extract ID' and 'Extract Name' fields, a 'Description' text area, 'File Format' (CSV selected), 'Sort By' (Hierarchy selected), 'Include Record Types' (Company, Product, Package Size, Package Configuration all checked), 'Product View' (Classic 3 Level Hierarchy selected), and a 'This Profile is active' checkbox. The 'Last Run Date' is 'Never', 'Extract Data' is 'Product', 'Start Date' is '2/27/2025', and 'End Date' is empty. 'Record Status' is 'Active'. The 'Extract Type' dropdown is highlighted with a red box and shows 'Full' selected. 'Change Type' is 'All Records'. 'Frequency' is 'Weekly', 'Crop' is '-- SELECT --', and 'Treatment Only' is unchecked. 'Include Categories' shows 'Primary' and 'Secondary' categories all checked. 'License Extract Criteria' shows 'All' selected. At the bottom left, the 'Submit' button is highlighted with a red box, along with 'Delete' and 'Back' buttons.

Now, when selecting the Customized extract type, the Submit button has been replaced by the new Customizations button.
