PCR 281: Provide Completed Add/Update Page to User Upon Declined Directory Request

Any time a request is sent to Member Services for review, the submitter receives an email notifying them that the request is under review. Once Member Services approves or declines the request, the user receives email notification with the status, accepted or declined.

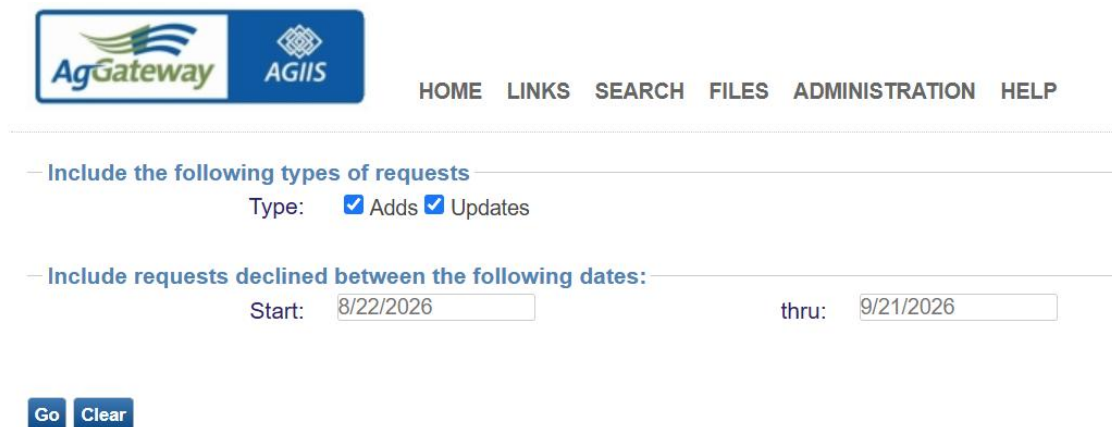

Member Services has heard from users over the years that it is counterproductive to have to re-enter everything in these instances. For this reason, we have added a "Declined Request List" option under the "Administration" tab.

The screenshot shows the AgGateway AGIIS website interface. The top navigation bar includes links for HOME, LINKS, SEARCH, FILES, ADMINISTRATION, and HELP. The ADMINISTRATION tab is selected, and a dropdown menu is open, showing options: MY AGIIS, MY PROFILE, MY SUBSCRIBER PROFILE, MY USERS, and DECLINED REQUEST LIST (highlighted in red). To the right of the dropdown menu, a table displays counts for various request types:

Count
136,489
375
136,114
47
19
2

Users will be able to select what kind of request (adds, updates, reactivations, duplicates) and select a date range.

The screenshot shows the AgGateway AGIIS website interface with the ADMINISTRATION tab selected. Below the navigation bar, there is a section for filtering requests:

Include the following types of requests

Type: ☒ Adds ☒ Updates

Include requests declined between the following dates:

Start: thru:

Go Clear

The resulting list will show declined requests in their organization, for the categories checked.

PCR 280: Make User Password Visible Upon Entry

A user recently had issues logging into AGIIS due to an incorrect password. After multiple failed logins and a call into Member Services, it was discovered that the user copied and pasted the password into the password field. However, when copying the password, a space was inadvertently included. Today the password is masked and the user could not identify the mistake. As a result of this experience, it was suggested that we make the password visible upon entry. Therefore, once the password field has been filled, a user will be able to click the "eyeball" icon to the right to confirm what was entered.

The screenshot displays the AGIIS login page. At the top, there is a header bar with the 'AgGateway' logo on the left and the 'AGIIS' logo on the right. Below the header, the 'Log In' section is visible. It contains two input fields: 'User ID' and 'Password'. The 'Password' field is currently masked with dots. To the right of the 'Password' field, there is a small circular icon with an eye, which is used to toggle the password visibility. Below the input fields, there is a blue 'Login' button and a blue link labeled 'Forgot Password'.

PCR 278: REST Web Service Entity Update File

AGIIS was enhanced to include Representational State Transfer (REST) API to support entity updates. A web service can now be performed to return those entities that have been added, updated, or deleted from your GLN or EBID subset.

Swagger documentation has been added to the Links menu in AGIIS underneath the Tech Tools sub-menu, by clicking on the Rest Web Services link. Swagger is a set of rules or specifications for a format describing REST APIs. The format is both machine-readable and human-readable, therefore can be used to share documentation among product managers, testers and developers, but can also be used by various tools to automate API-related processes.

The following Swagger resource guide will help users who want to test basic REST functionality.

[Swagger Resource Guide](#)

For more detailed testing and implementation, users can also use Postman. Download Postman [HERE](#). Below is a helpful resource guide to help users implement this testing resource.

[Postman Resource Guide](#)

If you have any questions about the REST Web Services enhancement, or would like to obtain user credentials, please contact Member Services.

PCR 277: ASCII File Format Addition to GLN Update Extract Profile

On Saturday, 28 March, AGIIS was updated with the following enhancement:

A subscriber requested to add the ASCII file format as an option to receive GLN directory Updates. Prior to this enhancement, they received an EBID subset extract in ASCII format and has an established process to consume and update their internal system. Previous system limitations within AGIIS prevented this from being a possibility, as the GLN Update Extract profile only provides a CSV and XML file format options. The subscriber would have had to build a new internal process to consume a CSV or XML file.

The ASCII file format was intentionally left out of the original GLN Update Extract profile design as at the time, there was a big push to move everyone to using XML. To help accommodate the subscriber's existing process to consume the ASCII file format, we have provided this file format as an available dropdown option within the GLN Update Extract profile (Appendix A).

PCR 276: Removal of NAPD-HPID

On Saturday, 31 January, AGIIS was updated with the following enhancement.

The North American Purchaser Directory/Harvest Partners Identification Number (NAPD/HPID) is a legacy 16-digit unique identifier that was primarily used for farm businesses and growers. While the identifier is no longer being assigned to entities in the AGIIS Directory, it was still being displayed for historical purposes.

An AGIIS user proposed an enhancement to remove this legacy identifier from AGIIS as it is no longer being utilized by most subscribers. The removal of this identifier from view will clean up the look of the entity pages and will eliminate confusion, especially with new users, as to why the identifier is being displayed.

Below is what the Entity Search and Entity View pages now look like, without the NAPD.
